Cell Six	NHS Digital		

# 1 Release

## 1.1 Objectives of the Document

The objective of this release note is to detail the contents of the Portal Wellington Release.

This document lists the new features and bug fixes that shall be deployed on 27/01/2022, alongside any known errors found during testing.

## 1.2 Objectives of the Release

The objective of Wellington 2.0 is to deploy into Production an updated set of changes to the Portal application that have been completed by the development team. A release can contain:

- New features (Product Backlog Items aka PBI's), and
- Defect resolutions (aka Bug Fixes)

## 1.3 Release Content

The contents of the release are listed below:

### 1.3.1 Product Backlog Items

#### 1.3.1.1 Portal Projects Functionality

ID	Title

#### 1.3.1.2 BAU Functionality

ID	Title
56021	Enable TLS 1.2 for Twilio as older version will no longer be supported
55447	Application account password reset notification template changes

### 1.3.2 Bug Fixes

#### 1.3.2.1 Portal Projects

ID	Title

#### 1.3.2.2 BAU

ID	Title
53667	Bulk account provisioning performance enhancements

## 2 Initial Proposed Release Functionality

### 2.1 High-level Functionality

The following section provides details of the initial proposed release functionality that is being delivered as part of the Wellington release.

#### 2.1.1 Product Backlog Items

##### 2.1.1.1 Portal projects functionality

##### 2.1.1.2 BAU functionality

- **56021 – Enable TLS 1.2 for Twilio as older version will no longer be supported**

The NHSmail portal has been updated to force the use of TLS1.2 when connecting to Twilio API endpoints used for sending SMS messages.

- **55447 – Application account password reset notification template changes**

An organisation or trust managing applications accounts will receive notifications that the accounts password is due to expire. The email notification sent out has been updated to make the wording clearer and to include the email address of the application account in the subject and body of the mail.

#### 2.1.2 Bug Fixes

##### 2.1.2.1 Portal Projects

##### 2.1.2.2 BAU

- **53667 – Bulk account provisioning performance enhancements**

Through the NHSmail portal there is the ability to bulk provision accounts through a CSV bulk process, as part of this process records are written into the Audit and people finder store. The implementation of this bug modifies the connection configuration to the audit and people finder store to improve performance of the bulk provisioning process.

## 3 Items dropped from Release after Testing

This section will be updated post testing detailing any items that have been removed from the release due to failing testing or not working as designed.

Any items de-scoped will re-enter the product backlog for prioritisation into a future release.

### 3.1.1 Product Backlog Items

ID	Title	Rationale

### 3.1.2 Bug Fixes

ID	Title	Rationale

## 4 Known Defects going into the Release

ID	Work Item Type	Title	Severity	Comments	Target Release

## 5 Release Deployment Approval

This section will be completed prior to the final release note being issued. The following approval will be provided by the Accenture NHSmail Service Delivery Lead or a suitably empowered representative to confirm that the release can be deployed into the production environment.

Name	Role	Date	Approved/Rejected
Adam Bage	NHSmail Service Lead	27/01/2022	Approved
